

39th Gas-Lift Workshop
Houston, Texas, USA
May 16 – 20, 2016

Automating Gas-Lift Injection Rates

Darren Doige
Oil and Gas,
Industry Solutions

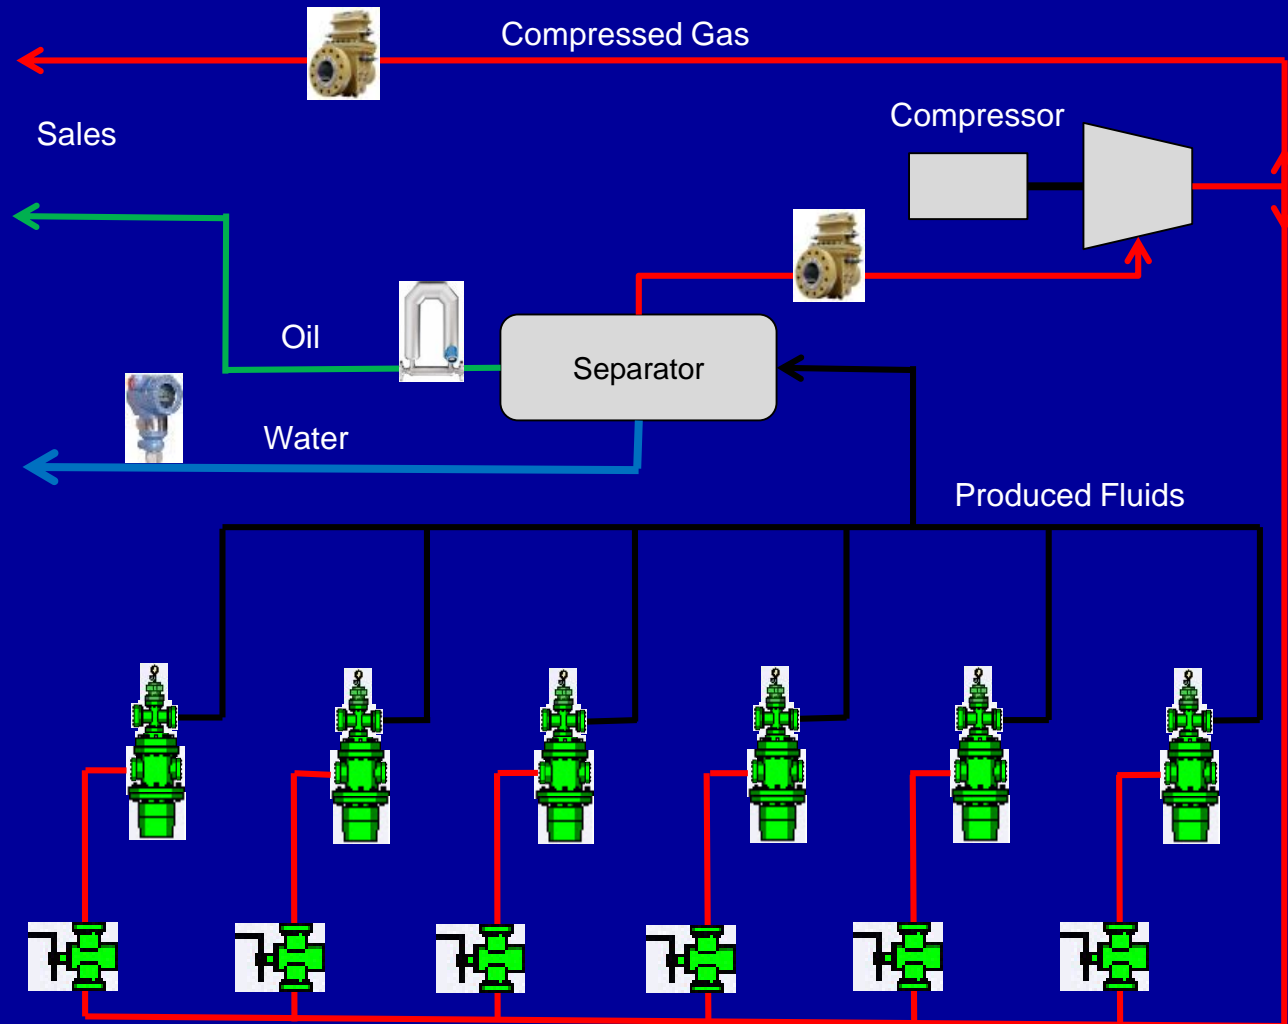

Agenda

- **Traditional Method of Optimization**
- **Gas Lift Challenges**
- **Single Well Optimization**
- **Constraints & Disruptions**
- **Multi Well Optimization**
- **Dynamic Lift Optimizer**
- **Case Study / Typical Business Results**
- **Conclusion**

Traditional Solution

- Manual operations
- Lack of insight into well production
- Optimization is trial and error
- Difficult to respond to changes
- Slow, open loop
- Operating in a dynamic environment

Challenges with Manual Operations

Inability to make real-time **adjustments** to gas lift rates in response to well variability

Inability to effectively **distribute** lift gas to the most profitable wells

Inability to meet my **production** targets

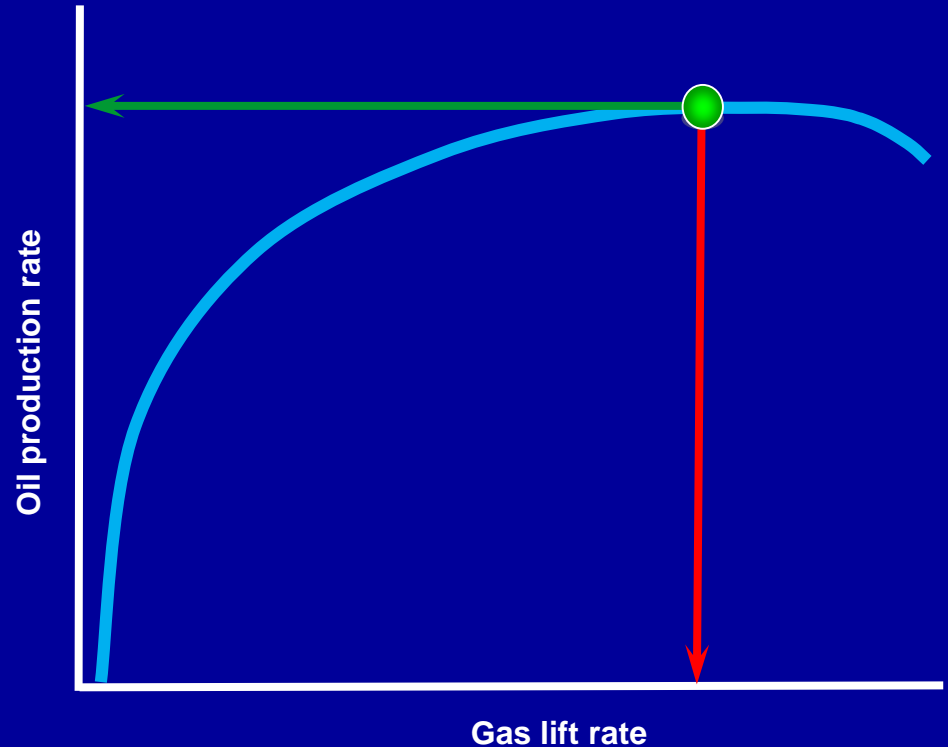

“

I'm not maximizing production with the most economical use of my lift resources

”

Optimize Single Well

- Oil production is a non-linear function of gas rate.
- At low rates, oil production increases with gas lift rate.
- At high rates, oil production decreases because of the increase of back pressure in the flow system.
- Determine gas rate required to maximize production.

System Constraints & Disruptions

- **Constraints**

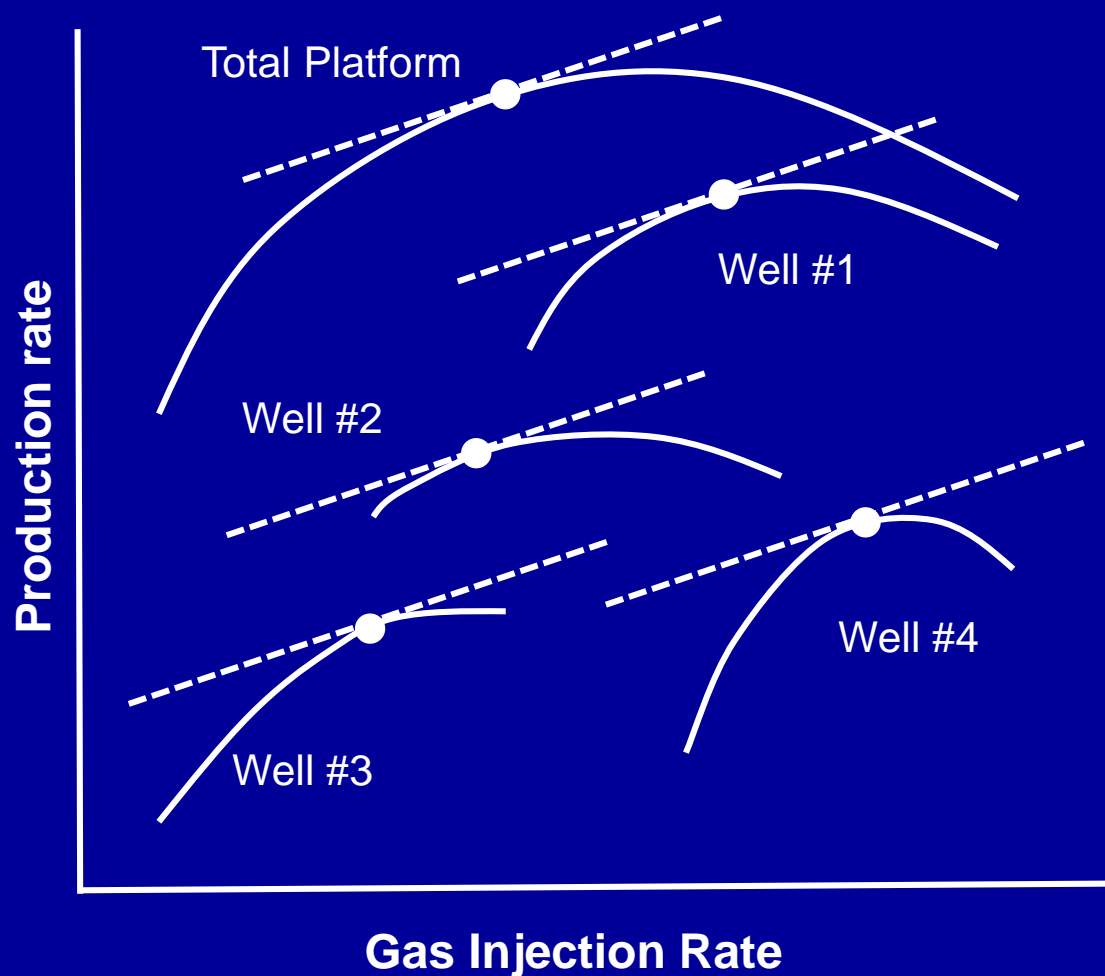

- Availability of compressed gas
- Separation Capacity
- Water disposal
- Production minimums

- **Disruptions**

- Equipment outages
- Well slugging
- Well workovers & shut-ins

**How much should I produce from each well
if I cannot maximize them all?**

Solution: Optimize the Platform

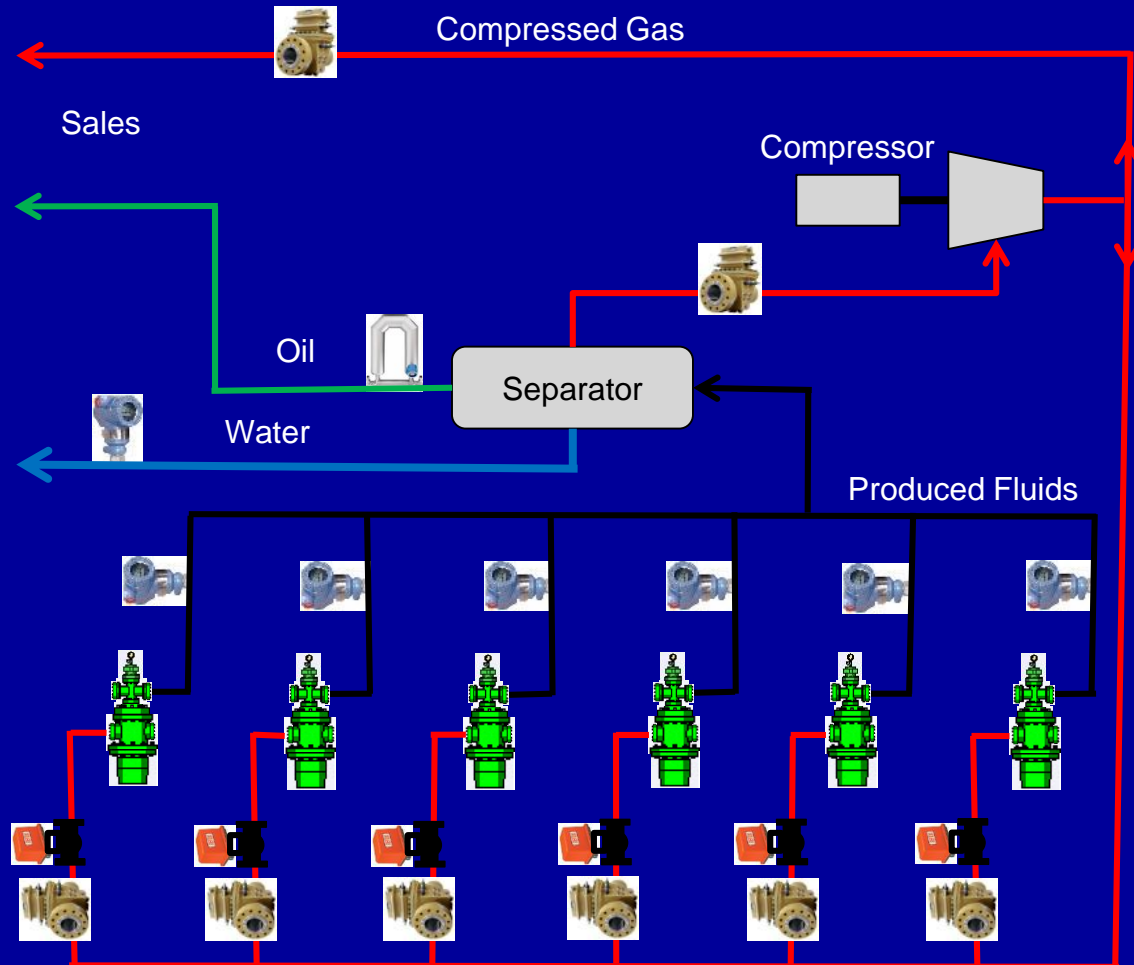

● Optimal gas distribution

Key Process Enablers

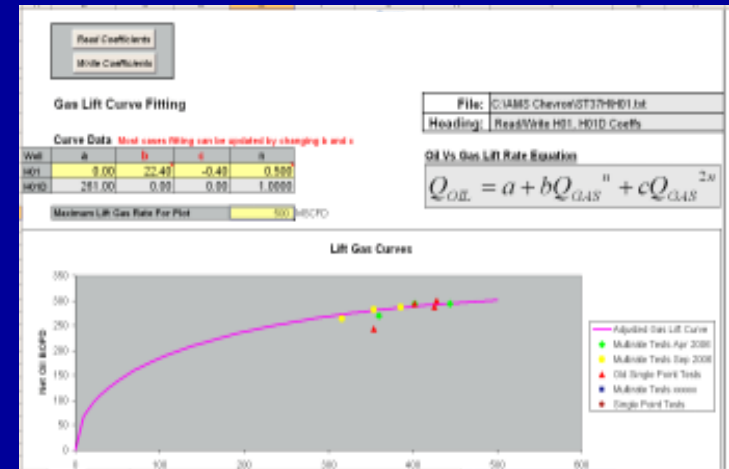

- Measurement of well production
- Insight into facility constraints
- Regulation of lift gas
- Optimizer

Well	Flow Rate	Pressure	Temperature	Gas Lift	Water	Oil	Separator	Compressor
W1	1000	100	100	100	100	100	100	100
W2	1000	100	100	100	100	100	100	100
W3	1000	100	100	100	100	100	100	100
W4	1000	100	100	100	100	100	100	100
W5	1000	100	100	100	100	100	100	100
W6	1000	100	100	100	100	100	100	100

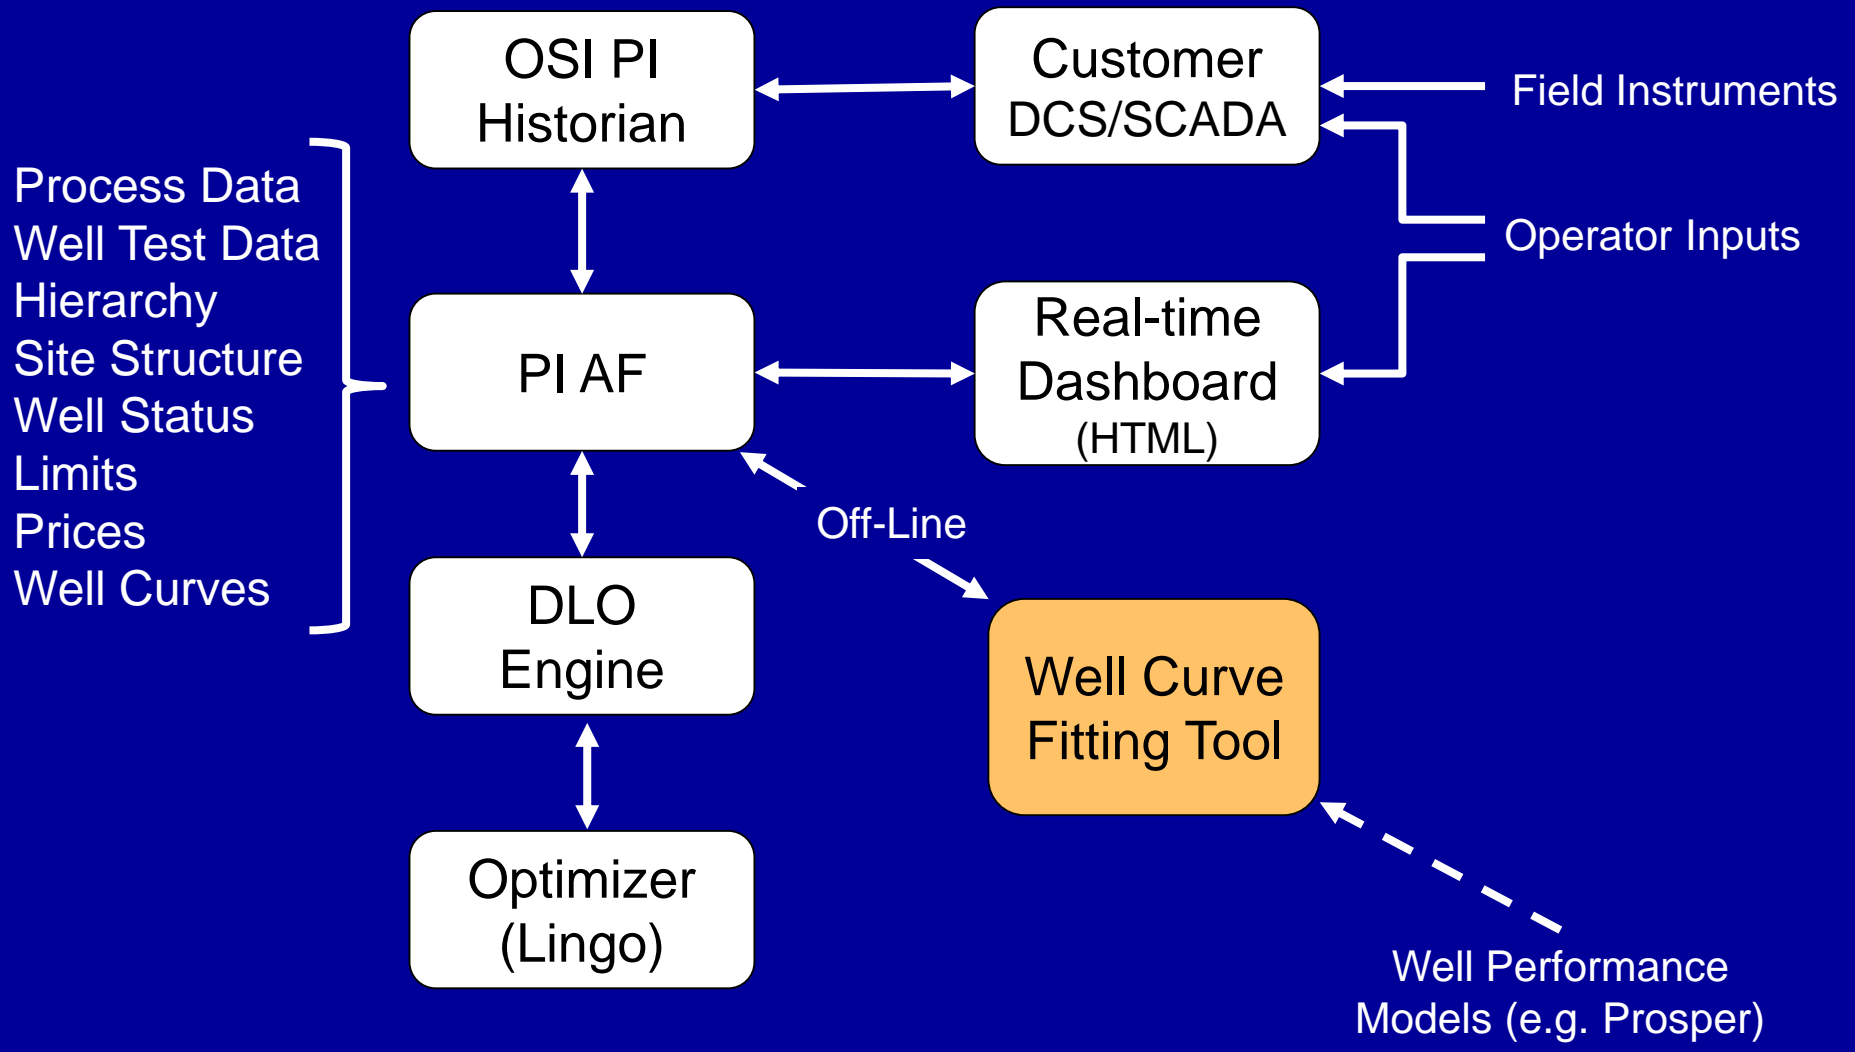

Dynamic Lift Optimizer

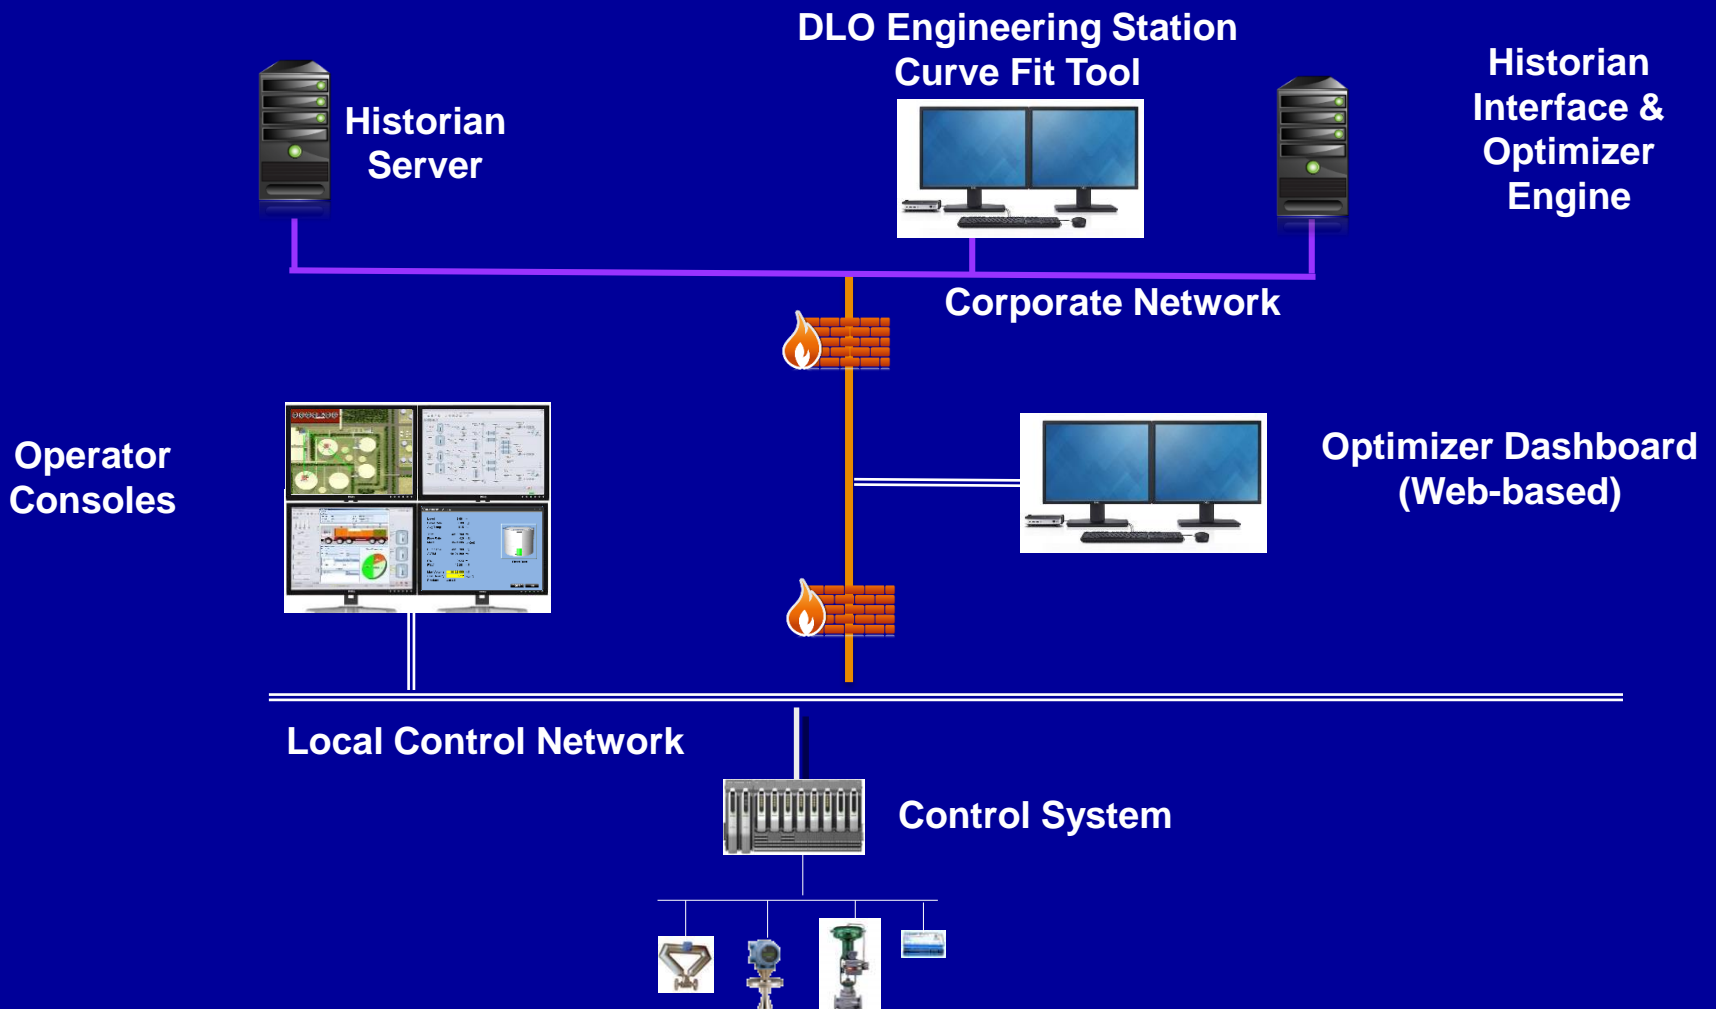

- Online, real-time, closed loop optimization engine
- Gathers real time data from the field
- Tests the various combinations of lift gas rates against operating constraints and converges on an optimum
- Sends new lift gas rates to the automation system either as an advisory or as a new set point
- Makes the most of available gas and allocates gas to wells where it is most profitable

DLO Software Architecture

Optimizer Hardware Architecture

Automation Best Practice...

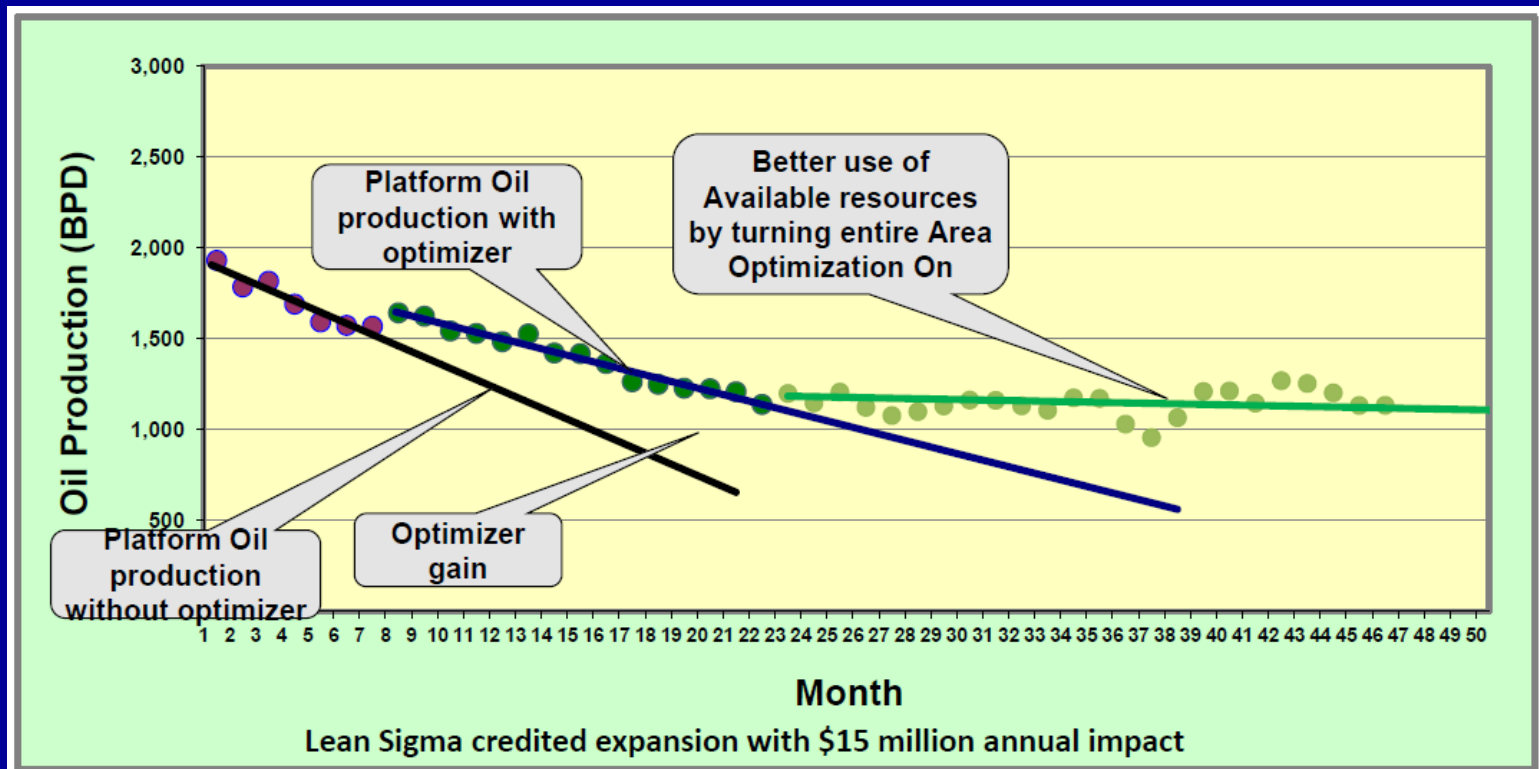

- Automate well testing to maximize well performance insight
- Optimize gas lift injection flow rates to each well automatically
- Respond to process constraints automatically
- Prioritize gas lift supply to the wells with the highest profitability
- Provide real-time analytical insight into process

Customer Result

Installed on approximately 200 wells covering several projects

- Achieved an average of over 10% production increase when decline considered
- \$15 million annual impact from case study

Conclusions

- **Online Optimization offers extremely beneficial business impacts**
 - Achieved base improvements and reduced the decline trajectory
- **Getting the well test data needed to performance match the well models is crucial**
- **Having a local champion, someone on the ground, to continuously work with operations to get the things needed is crucial**
- **Reliable measurements for lift gas rates and well tests are required (does not mean no variation – means no systematic problems)**
